

Elisa Pan

(408) 679-3390 | ep554@cornell.edu | [elisa-pan-ep](https://elisa-pan-ep.github.io) | github.com/ElisaPan | Los Gatos, CA

EDUCATION

Cornell University, College of Arts and Sciences, Ithaca, NY

Anticipated Graduation: May 2028

B.A. in Computer Science, Minors in Artificial Intelligence and Business | **GPA: 3.825/4.3**

Relevant Courses: Algorithms, Data Structures & Functional Programming, Computer Vision, AI Reasoning & Decision-Making, Linear Algebra, Statistics, Discrete Structures, OOP & Data Structures, Android Development

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, OCaml, C#, Kotlin, HTML/CSS, SQL, GDScript, R

Technologies and Tools: React, Flask, Firebase, SQLAlchemy, Git, Gradle, PostgreSQL, OUnit2, Bisect_ppx

Areas: Full-Stack Development, Mobile & Web Development AI/ML Systems, Product Engineering, System Design

EXPERIENCE

OneHope – Innovation Intern

June – Aug 2026

- Independently designed and built full-stack internal admin portal, partnering directly with company software development directors to translate operations pain points into product requirements.
- Coordinated with directors and IT staff to test functionality and roll out the portal org-wide.
- Owned project end to end, including architecture, development, user interface design, documentation, and deployment, as the sole engineer, from first stakeholder conversation through handoff.
- Conducted retrospective study of innovation initiatives: scoped project parameters from open-ended problem and developing design of final interactive display interface, working directly with the Director of Innovation.

CampusCares – Lead Mobile Developer & Full-Stack Engineer

Feb 2026 – Present

- Independently lead development of the mobile app's transition to React Native from the existing React + Flask web platform, driving architecture decisions and ensuring feature parity between web and mobile.
- Write TypeScript across authentication, navigation, API integration, and dynamic UI components (19k+ lines to date) rapidly translating web functionality into a mobile experience.
- Work with real users and stakeholders to integrate features and improve usability for a platform serving 400+ users across 50+ campus organizations.

Girls Who Code – Instructor (Advanced Track)

Feb 2026 – May 2026

- Taught weekly programming classes (Python, HTML/CSS/JS) to middle school students.
- Mentored students individually, adapting explanations and debugging support to different skill levels.
- Consistently received positive student feedback, with high engagement and retention across weekly sessions.

PROJECTS

Hope Gallery Admin Portal (React, C# ASP.NET Core, Azure AD)

June – Aug 2026

- Built full-stack internal portal syncing and displaying 370+ users from organization's digital-asset platform, with searchable/filterable tables, role-scoped views, and an access-request workflow.
- Developed a C# background service to sync users from the Bynder REST API (OAuth 2.0), with pagination, scheduled daily refresh, and per-record error isolation.
- Implemented Azure AD SSO (MSAL, JWT validation) with a role tier system for data visibility and actions.
- Built Microsoft Graph integration that auto-generates support tickets via email from the signed-in user, and a data-driven access-reference tool mapping live Bynder role flags to readable permissions.
- Debugged authentication and API integration issues using Chrome DevTools (inspecting network requests, response payloads, and console errors to trace failed token exchanges and api calls), resolving several non-obvious bugs through iterative research and testing.
